

# Modern Manufacturing Fundamentals Training

Jumpstart workforce productivity at your company with training designed to help your employees reach benchmark levels in key skill areas.

## Module I:

- Lean principles and culture – your employee will learn how important they are to the organization and to every individual in the organization – and why you need them to give 100%.
- Foundation for Precision Measurement – sharpen the shop math and measurement skills that tend to be a weakness for today’s employees.

## Module II:

- Precision Measurement in the modern manufacturing setting. Converting English to Metric, Measure Precisely by ruler, micrometer, caliper, read Vernier scale, understand tolerance, dial indicators/mounting, gage blocks, torque.
- Workplace Safety – let us support your company’s internal efforts to hold firm to a culture of safe work activities.

## Module III:

- Introduction to Print Reading – understand the importance of industrial prints, print formats, basic symbols. Get comfortable and be ready to learn quickly on the job.
- Automation and Mechanical Awareness – gain familiarity with workplace automated equipment, Human-Machine Interfaces, and hands-on mechanical exercise with tools.
